

Proposition :- A proposition is a declarative sentence that is either true or false but not both.

Connectives

And - \wedge

T	T	F
T	F	F
F	T	F

OR - \vee

T	F	T
F	T	T
F	F	F

Negation of P $\neg P$

Negation/Not - \neg

Implication - \rightarrow

Biconditional - \leftrightarrow

P	$\neg P$
T	F
F	T

$P \wedge q$

Conjunction

P	q	$P \wedge q$
T	T	T
T	F	F
F	T	F
F	F	F

$p \vee q$

AND OR

P	q	$p \vee q$
T	T	T
T	F	T
F	T	T
F	F	F

Conditional statement

p	q	$p \rightarrow q$
T	F	F

The conditional statement $p \rightarrow q$ is false when p is true & q is false & true otherwise.

Hence,

p is hypothesis
q is conclusion

P	q	$p \rightarrow q$
T	T	T
T	F	F
F	T	T
F	F	T

Biconditional

$P \leftrightarrow q$ if and only if
 (p $\rightarrow q$) \wedge (q $\rightarrow p$)

P	q	$P \leftrightarrow q$
T	T	T
T	F	F
F	T	F
F	F	T

Exclusive OR

P	q	$P \oplus q$
T	T	F
T	F	T
F	T	T
F	F	F

Inverse, Converse, Contrapositive

$P \rightarrow q$ — (If p , then q)
Hypothesis Conclusion

$P \rightarrow$ You do your homework

$q \rightarrow$ You will not be punished

If you do your homework than you will not be punished.

Inverse:

Negation of both hypothesis & conclusion

$\neg P \rightarrow \neg q$

If not P than not q

* If you do your homework than you will not be punished.

Inverse: If you do not do your homework than you will be punished.

Converse: If q than p (writing question)

$$q \rightarrow p \quad q \leftarrow p \text{ P.T.}$$

If you do your homework you will not be punished. P

④ If you will not be punished than you do your homework. P

Contrapositive:

$$\neg q \rightarrow \neg p$$

If not q than not p

If you are punished than you did not do your homework.

✳ If it is raining than the grass is wet.

Inverse: $\neg p \rightarrow \neg q$

If it is not raining than the grass is not wet.

Converse: $q \rightarrow p$

If the grass is wet than it is raining.

Contra positive :-

$$\neg q \rightarrow \neg p$$

If the grass is not wet than it is not training.

④ Sentence G whenever it is raining the home team wins.

The home team wins whenever it is raining.

Inverse :-

$$q \leftarrow p$$

$$\neg p \rightarrow \neg q$$

If it is not raining than the home team does not wins.

Converse :-

$$q \rightarrow p$$

If the home team wins than it is raining.

Contra positive :-

$$p \leftarrow q$$

If the home team does not wins than it is not raining.

Let p and q be the proposition "The election is decided" and the votes have been counted"

a) $\neg p$

The election is not decided.

b) $p \vee q$

The election is not decided or the votes have been counted.

c) $\neg p \wedge q$

The election is not decided ^{but} and the votes have been counted.

d) $q \rightarrow p$

The votes have been counted whenever the election is decided.

e) $\neg q \rightarrow \neg p$

The votes haven't been counted whenever the election is not decided

f) $\neg p \rightarrow q$

If the election is not decided than the votes haven't been counted.

g) $p \leftrightarrow q$ [If and only if, necessary and sufficient]

The election is not decided if and only if the votes have been counted.

h) $\neg q \vee (\neg p \wedge q)$ and
Either the votes have not been counted or the
election is not decided but the votes have been
counted.

$(P \wedge q) \leftarrow (P \vee q)$ (d)

Predicate

$x > 3 \rightarrow x$ is greater than 3

↳ Variable (Subject) (Predicate)

Eg: Let $P(x)$ denote the statement $x > 3$ what are the truth $P(4)$ & $P(2)$

$$P(4) \Rightarrow x > 3$$

$$\Rightarrow 4 > 3 \quad T$$

$$P(2) \Rightarrow x > 3$$

$$\Rightarrow 2 > 3 \quad F$$

Q: Let $Q(n, y)$ denote the statement $n = y + 3$ what are the truth values of the proposition.

$$Q(1, 2) \text{ & } Q(3, 0)$$

$$Q(1, 2) \Rightarrow n = y + 3$$

$$\Rightarrow 1 = 2 + 3$$

$$\Rightarrow 1 = 5$$

$$\therefore 1 \neq 5 \quad F$$

$$Q(3, 0) \Rightarrow n = y + 3$$

$$\Rightarrow 3 = 0 + 3$$

$$\Rightarrow 3 = 3$$

T

Q: Let $R(n, y, z)$ denote the statement $n+y$.
what are the truth values of the proposition

$$R(1, 2, 3) \& R(0, 0, 1)$$

$$R(1, 2, 3) \Rightarrow n+y=2$$

$$\Rightarrow 1+2=3$$

$$\Rightarrow 3=3 \quad (\text{True})$$

$$R(0, 0, 1) \Rightarrow n+y=2$$

$$\Rightarrow 0+0=1$$

$$\Rightarrow 0 \neq 1 \quad (\text{False})$$

State the value of n after (the) statement if
 $P(n)$ is the "if $n:=1$ is execute where $P(n)$ is the
Statement $"n > 1"$. Thus if $n > 1$ then $n := 1$
(a) $n = 0$
 $\Rightarrow n > 1$
 $\Rightarrow 0 > 1$ is false & will not execute.

$$(\text{b}) \quad 2 \neq 1$$

b) $n=1$

$$n > 1$$

$$1 > 1 \quad (\text{F})$$

c) $n=2$

$2 > 1$ - True, the assignment statement will execute &
 $n = 1$.

Eg: Let $P(n)$ denote the statement $n \leq 4$ what are the truth values —

a) $P(0)$

$$P(n) = n \leq 4$$

$$P(0) = 0 \leq 4$$

(T)

b) $P(4) = 4 \leq 4$

b) $P(4) = 4 \leq 4 \quad (\text{T})$

c) $P(6) = 6 \leq 4$

(F)

Logical equivalences.

Tautology — Always T

Contradiction — Always F

$$\begin{aligned} & \neg p \vee (\neg p \wedge q) \\ \equiv & \neg p \wedge \neg(\neg p \wedge q) \quad [\text{De Morgan's Law}] \\ \equiv & \neg p \wedge [\neg(\neg p) \vee \neg q] \\ \equiv & \neg p \wedge (p \vee \neg q) \\ \equiv & (\neg p \wedge p) \vee (\neg p \wedge \neg q) \\ \equiv & F \vee (\neg p \wedge \neg q) \\ \equiv & (\neg p \wedge \neg q) \vee F \quad [\text{commutative Laws}] \\ \equiv & \neg p \wedge \neg q \quad T \vee F = T \quad [\neg p \wedge \neg q] \end{aligned}$$

→ Proved

PF (9) → Quantifier

All, Some, many, none, few.

Universal Quantifier \rightarrow For all

Existential quantifier \rightarrow There exist

Let $P(n)$ be a statement

$$\begin{array}{l|l}
x+1 > x & P(3) = 2+1 > 2 \\
P(1) = 1+1 > 1 & (P=3 > 2) \wedge 9 \text{ } \textcircled{T} \\
= 2 > 1 \text{ } \textcircled{T} & (P \wedge Q \neg) \vee (Q \wedge Q \neg)
\end{array}$$

For all n $P(n)$ is true. $(P \wedge Q \neg) \vee \exists$

$\forall n P(n)$ is true for all.

Eg: Let $Q(n)$ be the statement $\exists n (P \wedge Q \neg)$.

$$P \vdash \wedge Q \neg \exists n < 2 P \wedge T \vdash \exists n P \vdash \wedge Q \neg$$

$$Q(1) = 1 < 2 - \textcircled{T}$$

$$Q(2) = 2 < 2 - \textcircled{F}$$

$$Q(3) = 3 < 2 - \textcircled{F}$$

$\exists n P(n)$ is true.

$\forall n P(n) \rightarrow P(n)$ is true for every n , then all $P(n)$ is true for every n .

$F \rightarrow \exists n P(n)$ is false

$F \rightarrow \exists n P(n)$ is true

$F \rightarrow \exists n P(n)$ is true

T

Universal Quantifier

$P(n)$ for all values of n in the domain.

$\forall n P(n)$

Eg: Let $P(n)$ is the statement $n+1 > n$ & Let us assume that, domain set of all +ve integers

What is the truth value of $\forall n P(n)$

Ans : $P(n) = n+1 > n$

$$P(1) = 1+1 > 1$$

$$= 2 > 1 - \textcircled{1}$$

$$P(2) = 2+1 > 2$$

$$= 3 > 2$$

①

$$P(3) = 3+1 > 3$$

$$= 4 > 3$$

②

$\forall n P(n)$ is true for all $P(n)$

Eg: Let $Q(n)$ to be statement "n < 2" what is the truth value of the quantification.

$\forall n Q(n)$ where the domain consists of all real numbers?

$$Q(n) = n < 2$$

$$Q(1) = 1 < 2 - \text{True}$$

$$Q(3) = 3 < 2 - \text{False}$$

$$Q(1.5) = 1.5 < 2 - \text{True}$$

$\forall n P(n)$ is false.

Eg: Let $P(n)$ is the statement $n^2 > 0$ & let us assume that domain set of all what is the true value of $\forall n P(n)$

$$P(n) = n^2 > 0$$

$$P(3) = 3^2 > 0$$

$$P(0) = 0^2 > 0 \quad \text{False, since } 0^2 = 0 > 0 \text{ is false}$$

$$\begin{aligned} P(2) &= 2^2 > 0 \\ &= 4 > 0 - \text{True} \end{aligned}$$

$$\begin{aligned} P(5) &= 5^2 > 0 \\ &= 25 > 0 \end{aligned}$$

Eg: Let $P(n)$ is the statement " $n^2 < 10$ " & the domain consists of positive integers not exceeding what is the truth value of $\forall n P(n)$.

$$P(n) = n^2 < 10$$

$$P(2) = 2^2 < 10 = 4 < 10 \quad \text{F}$$

$$P(3) = 3^2 < 10 = 9 < 10 \quad \text{F}$$

$$P(5) = 5^2 > 10 = 25 > 10 \quad \text{T}$$

$\forall n$ is a false.

Existential quantification

There exists an elements n in domain

$\exists n P(n) \rightarrow$ $\exists n (n > 3 \wedge n < 5)$ But $1 \notin [3, 5]$
 $T \vee F \wedge T$

Eg: Let $P(n)$ denote the statement " $n > 3$ " what the truth values of the quantification $\exists n P(n)$ where the domain consist of all real numbers

$$P(n) = n > 3$$

$$P(-1) = -1 > 3 - \text{F}$$

$$P(2) = 2 > 3 - \text{F}$$

$$P(4) = 4 > 3 - \text{T}$$

$\exists n P(n)$ is true:

Eg: $P(n) = n^2 > 10$ — Positive integers, not exceeding 4.

$$P(1) = 1^2 > 10 \Rightarrow 1 > 10 - \textcircled{F}$$

$$P(4) = 16 > 10 - \textcircled{T}$$

$$P(3) = 3^2 > 10 = 9 > 10 - \textcircled{F}$$

$\exists n P(n)$ is true.

Eg: $P(n) = n > 3$ — Real number.
L True.

(a) $n = n^2$

$$P(0) \Rightarrow 0 = 0^2 \Rightarrow 0 = 0 - \textcircled{T}$$

$$P(1) \Rightarrow 1 = 1^2 \Rightarrow 1 = 1 - \textcircled{T}$$

$$P(3) \Rightarrow 3 = 3^2 \Rightarrow 3 = 9 - \textcircled{F}$$

$$P(-1) \Rightarrow -1 = (-1)^2 \Rightarrow -1 = 1 - \textcircled{F}$$

(e) $\exists n P(n) \Rightarrow \textcircled{T}$

(f) $\forall n P(n) \Rightarrow \textcircled{F}$

Sets

A set is a unordered collection of distinct objects, called elements or numbers of the set.

$a \in A \rightarrow a$ is element of set A

$a \notin A \rightarrow a$ is not element of set A

Set \rightarrow denote by uppercase letter.

elements \rightarrow " " lowercase letter.

$$Q = \{1, 3, 5, 7, 9\}$$

\hookrightarrow set of odd positive integers.

Representation of set.

- \rightarrow Tabular form.
- \rightarrow Description form.
- \rightarrow Set builder notation.

Listing of the elements of a set, separated by comma & enclosed within brackets.

$$A = \{1, 2, 3, 4, 5\}$$

Set of five natural numbers.

$$B = \{2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30\}$$

Set of even numbers upto 50.

Set of even numbers less than or equal to 5

$$C = \{1, 3, 5, 7, \dots\}$$

Set of odd positive numbers.

$$D = \{1, 2, 3, 5, 7, 9\}$$

"ODD result".

Set of odd positive numbers less

than 10.

Set builder notation:

$$O = \{n \in \mathbb{N} \mid n \text{ is odd positive integer less than } 10\}$$

$$\{n \in \mathbb{Z}^+ \mid n \text{ is odd and } n < 10\}$$

{ } → Represent that

→ set such that

$N = \{0, 1, 2, 3, \dots\}$ → set of natural numbers

$Z = \{-2, -1, 0, 1, 2, \dots\}$ → set of integers

$Z^+ = \{1, 2, 3, \dots\}$ → set of positive integers

$R = \text{set of real numbers}$

$R^+ = \text{set of positive real numbers}$

$C = \text{set of complex numbers}$

write the tabular form & set builder notation of "The set of positive integers less than 100"

$Z^+ = \{1, 2, 3, 4, 5, 6, 7, \dots, 99\}$

$\{n \in Z^+ \mid n \text{ is positive integer} \text{ and } n < 100\}$

$\{n \mid n \text{ is positive integer less than 100}\}$

$Q = \{n \mid n \text{ is rational number}\}$

$\{0, 1, Q, \dots\}$, the set of rational numbers.

front 0.92314984 ... { }

1. 0.92314984 ... { }

Equal set :

Two sets are equal if and only if they have same element.

$$A = \{ 3, 5, 7 \}$$

$$B = \{ 1, 3, 5 \}$$

↳ set of equal set.

$$\forall n (n \in A \leftrightarrow n \in B)$$

Empty set / null set :

Set which has no element.

$$\{ \}, \emptyset$$

Singleton set :

A set with one element is called a singleton set.

$$\{ \emptyset \}$$
